Subject index

Alloys
– aluminum nickel 160
– eutectic 126
– immiscible 152
– iron carbon 141
– copper lead aluminum 152
Alumina 391
Aluminum 167
– indium 152
– nickel alloys 160
Ammonium
– dihydrogen phosphate 248
Antimony
– tribromide 303
– triiodide 303
Apparatus
– for melt growth
– – by Bridgman–Stockbarger method
– – – in centrifuge
– – – – of lead telluride 24
– – – of cadmium fluoride 339
– for thin film growth
– – by metalorganic molecular beam epitaxy
– – – of gallium arsenide 195
– for vapor diffusion crystallization
– – under microgravity
– – – of proteins 200
– for miscellaneous purposes
– – control of solid–liquid interface 371
– – obtaining high gravity 66
Arsenic
– triiodide 303

Barium
– nitrate 1
Bismuth
– strontium calcium cuprate 122
– triiodide 303
Burton–Cabrera–Frank theory 241

Cadmium
– fluoride 339
– telluride 322
– zinc telluride 261
Characterization methods
– by absorption spectroscopy 317, 322, 339
– by cathodoluminescence 74, 177
– by differential thermal analysis 381
– by electrical methods 98
– by electron diffraction 221
– by electron microscopy 195, 221, 229, 271
– by infrared spectroscopy 309, 339, 393, 399
– by interferometry 177, 248
– by magnetic properties 122, 403
– by optical microscopy 70, 79, 94, 98, 160, 177, 221, 248, 281, 309, 313, 329
– by optical properties 215
– by photoluminescence 195, 322
– by Raman spectroscopy 322
– by reflection high energy electron diffraction 195, 229
– by thermogravimetry 393
– by X-ray methods 79, 122, 195, 248, 313, 322, 363, 381, 393, 403, 407
Computer simulation 261
Convection 1, 8, 24, 41, 66, 79, 94, 98, 111, 126, 141, 152, 160, 281, 297
Copper
– lead aluminum 152
Crystal growth
– under high gravity conditions 1, 8, 24, 41, 61, 66, 70, 74, 79, 94, 98, 111, 122, 126, 141, 152, 160, 167

Dendritic growth
– of iron carbon alloys 141
– of trihalides of group V_B elements 303
Diamond 177, 271, 345
Diffusional control 24, 79, 94
Dislocations 248, 322, 329
Distribution coefficient 317
Dopants 98, 292, 317

Etching
– chemical 70, 98, 303
Eutectic growth
– of alloys 126, 141, 160

Finite element method
– simulating cadmium zinc telluride 261

Gallium
– antimonide 8, 70
– arsenide 74, 195
Garnets
– ferro 297
– rare earths 313

Germanium
– selenide 79
Grain boundary 70, 98

Heterojunction 322

Indium
– antimonide 8, 98
– gallium aluminum phosphide 292
Interface 70, 281, 322
Iron
– carbon alloy 141

Kinetics
– of growth 248, 292, 322, 403
– of interface control 371
– of nucleation 141

Lasers
– of yttrium aluminate 363
Lead
– nitrate 1
– telluride 24
– tin telluride 94
Lithium
– niobate 215, 317
Lysozyme 200

Melt growth technique
– by Bridgman–Stockbarger method
– – control of 371
– – of cadmium fluoride 339
– – of cadmium zinc telluride 261
– – using a centrifuge
– – – analytical study of 111
– – – of gallium antimonide 8
– – – of immiscible alloys 152
– – – of indium antimonide 8
– – – of iron carbon alloys 141
– – – of lead telluride 24
– – – of lead tin telluride 94
– – – of semiconductors 66
– – – theory of 41
– by Czochralski method
– – of lithium niobate 215, 317
– – of rare earth garnets 313
– – of yttrium aluminate 363
– by floating zone method
– – of sodium nitrate 281
– by gradient solidification method
– – of sapphire 391
– by high gravity
– – of eutectic alloys 126
– – of gallium arsenide 74
– by traveling heater method
– – in centrifuge
– – – of gallium antimonide 8
– – – of indium antimonide 8
– by uniaxial solidification
– – in centrifuge
– – – of aluminum 167
– – – of gallium antimonide 8
– – – of indium antimonide 8
Mercury
– copper indium manganese telluride 381
– silver indium manganese telluride 381
Microgravity
– growth of proteins 200
Morphological stability 152
Morphology of growth 79, 221, 303, 329, 403

m-Nitroanaline 309
Nucleation 141, 229, 241
Numbers
– Arnold 24, 66
– Grashof 24, 297
– Rayleigh 8
– Taylor 8

Optoelectronic crystals 391
Organic crystals 200, 309, 368, 393, 399, 407

Perfection of crystals 1, 70, 79, 98, 221, 261, 322, 371
Periodic bond chain theory 329
Phase diagrams
– of diamond 271
– of mercury copper indium manganese telluride 381
– of mercury silver indium manganese telluride 381
– of rare earth garnets 313
Phenomenological theory 271
Potassium
– titanyl phosphate 329
Proteins 200, 407

Quantum wells/size effects
– of zinc telluride/cadmium telluride 322

Sapphire 391
Silicon 229, 241
Sodium
– nitrate 281
Solution growth technique
– by centrifugation over 1000g
– – of inclusion-free crystals 1
– by flux method
– – of ferrogarnet 297
– – of potassium titanyl phosphate 329
– – of yttrium barium cuprate 221, 403
– by hanging drop vapor diffusion
– – of virus 407
– by low temperature method
– – of ammonium dihydrogen phosphate 248
– – of m-nitroaniline 309
– – of organic crystals 368, 393
Step 229, 241, 248, 329

Strain 261, 322
Superconductivity 122, 221, 403
– bulk 403
– ceramics 122
– characterization 122, 221, 403
– crystal chemistry 403
– high T_c 122, 221, 403
– phase relationships 122
– stoichiometry 122
Supercooling, supersaturation 248, 303, 393, 403
Superlattices 322
Surface structure 229, 241, 329

Thermodynamics 271
Thin film growth
– by metalorganic molecular beam epitaxy
– – of gallium arsenide 195
– by molecular beam epitaxy
– – of zinc telluride/cadmium telluride superlattices 322
– by vapor phase epitaxy
– – through evaporation and condensation
– – – of organic crystals 399
– – through metalorganic chemical vapor deposition
– – – of diamond 271, 345
– – – of indium gallium aluminum phosphide 292
– theory of 229, 241

Vapor diffusion crystallization
– under microgravity
– – of proteins 200
Vapor growth technique
– by chemical transport
– – of trihalides of group V_B elements 303
– by evaporation and condensation
– – in centrifuge
– – – of germanium selenide 79
Virus 407

Yttrium
– barium cuprate 221, 403

Zinc
– telluride 322
